                                                                                                                                                                                                                                                                                                                                                                                              Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                          Score

The enzyme is useful for producing polyclonal or monoclonal antibodies. The polynucleotide is also useful as primer or probe for screening cDNA libraries to isolate desired full-length cDNA clones.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present sequence is a cDNA encoding sphingolipid desaturase from clone wrel.pk0004.c7 isolated from wheat etiolated seedling root cDNA library, wrel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Polynucleotide encoding delta-6 desaturase enzyme useful for producing transgenic plants and for producing antibodies specific to which is useful for screening cDNA expression libraries -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence

                                                                                                                                                                                                                                            The present sequence is useful for producing transgenic plants having altered levels of sphingolipid desaturase whi in turn would alter the fatty acid composition. The enzyme is useful for producing polyclonal or monoclonal antibodies. The polynucleotide is also useful as primer or probe for screening cDNA libraries to isolate desired full-length cDNA clones.
                                                                                                                                                                                                                                                                                                                                                                                           The present sequence is a cDNA encoding sphingoling from clone wrel.pk0004.c7:fis isolated from wheat seedling root cDNA library, wrel.
                                                                                                                                                                                                Sequence 1972 BP; 382 A; 616 C;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Disclosure; Page 48-49; 57pp;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present sequence is a cDNA encoding sphingolipid desaturase from clone cdelc pk001.08:fis isolated from corn developing embryo cDNA library, cdelc. The present sequence is useful for producing transgenic plants having altered levels of sphingolipid desaturase which in turn would alter the fatty acid composition. The enzyme is useful for producing polyclonal or monoclonal antibodies. The polynucleotide is also useful as primer or probe for screening cDNA libraries to isolate desired full-length cDNA clones.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Polynucleotide encoding delta-6 desaturase enzyme useful for producing transgenic plants and for producing antibodies specific to which is useful for screening cDNA expression libraries -

                                                                                                                                                                                                                                                                                                                                                          The invention describes an isolated nucleic acid encoding an evening primrose Delta6-desaturase. The nucleic acid and a vector expressing the nucleic acid are useful for producing a plant such as sunflower, soybean, maize, tobacco, peanut, carrot or oil seed rape plant, with increased gamma linolenic acid (GLA) content, and also for inducing or increasing production of GLA in a bacteria or plant deficient, lacking in or producing low levels of GLA. The nucleic acid is also useful for inducing chilling tolerance in plants. This sequence encodes the evening primrose delta6 desaturase involved in the production of gamma linoleic acid.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Novel nucleic acid encoding evening primrose delta6-desaturase which converts linoleic acid to gamma linolenic acid useful for producing gamma linolenic acid in transgenic plant or bacteria
                                                                                                                                                                                                                                                                                                                                      Sequence 1702 BP; 358 A; 471 C; 446 G; 427 T; 0 other;

                                                                                                                                                                                              for producing a plant (such as sunflower, soybean, maize, tobacco, peanut, carrot or oil seed rape plant) with increased gamma-linolenic acid (GLA) content by transforming a plant cell with the nucleic acid or vector and regenerating a plant with increased GLA content from the plant cell, for inducing or increasing production of GLA in an organism lacking in or producing low levels of GLA and for inducing production of octadecatetraenoic acid in at least one of a plant deficient or lacking in or producing low levels of octadecatetraenoic acid, a bacterium which produces alpha-linolenic acid or a bacterium which exhibits a delta-15-desaturase activity on a GLA substrate. This sequence represents
                                                                                                                                                                                                                                                                                                                                          The invention relates to a nucleic acid encoding an evening primrose delta-6-desaturase polypeptide. The nucleic acid, a vector comprising nucleic acid or a nucleic acid encoding delta-12-desaturase, is useful
                                                                                                                                                                                                                                                                                                                                                                                                                            Novel nucleic acid encoding evening primrose delta-6-desaturase, for producing plant with increased gamma linolenic acid content, for inducing octadecatetraenoic acid production in plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      WPI; 2003-066659/06

This invention describes a novel sphingolipid desaturase that selectively controduces a double bond into the sphingolase of the ceramide residue of sphingolipids and capnoids. A DNA sequence encoding the sphingolipid desaturase, or a vector containing the DNA sequence, can be used to produce transgenic plants, especially crop plants, with an increased or decreased delta-8-unsaturated long-chain base content or an altered delta-8-unsaturated long-chain base content or an altered contents are specially to compensate for a delta-8-unsaturated long-chain base deficiency, to exclude production of delta-8-unsaturated bases, to increase tolerance or resistance to soil salinity, ion stress or texicity, drought, wet conditions, cold or frost and/or phytopathogenic microorganisms, or to alter size growth and flowering time. Cells, transgenic organisms or plants containing the DNA sequence can be used to produce sphingolipids and capnoids with unsaturated sphingobases. The sphingolipids or capnoids can be used in cosmetics, pharmaceuticals and foods and as chemical raw
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      B. napus sld1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   261
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 315
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              255
```

The invention relates to an isolated nucleic acid promoter comprising at least one promoter that is

comprising a fus modified to have

fusion

expression in bacteria

CC of xylo, teto, trpo, malo or lambdacio, where at least one operator is constitued so binding of a repressor to an operator represses constitued so binding of a repressor to an operator represses constitued are vectors and constitued in cellular proliferation or required for proliferation of a compound in cellular proliferation or required for proliferation of a compound that reduces the activity or level of a compound identifying a compound that reduces the activity or level of a compound identified by the methods, a method of inhibiting the vector, a compound identified by the methods, a method of inhibiting the vector, a compound identified by the methods, a method of inhibiting the vector, a compound identified by the methods, a method of inhibiting the vector, a compound identified by the methods, a method of inhibiting the vector or cell consolidation of a gene in an operon required for proliferation using the vector, manufacturing an antibiotic comprising using the vector or cell and identifying a nucleic acid with promoter activity in Enterococcus consolidation, particularly for regulating gene expression in batteria and for identifying proliferation-required genes or molecules with potential antibiotic activity. The modified promoters are also
                                                                                                              useful for replacing endogenous promoters to create cells with specific regulatable genes. The present sequence is vector (or fragment) incorporating a fusion promoter sequence of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           altered activity in at least one gram-positive organism, or comprising T5, CP25, P32, P59, P1P2 or P1 linked to at least one operator consist of xylO, tetO, trpO, malO or lambdaclO, where at least one operator is

Example 1; Page 206-209; 246pp; English

cc promoter comprising at least one promoter that is modified to have

cc altered activity in at least one gram-positive organism, or comprising

cc 75, CP25, P32, P59, P1P2 or PL linked to at least one operator is

cc of xylo, teto, trpo, malo or lambdaclo, where at least one operator is

cc positioned so binding of a repressor to an operator represses

cc transcription from the fusion promoter. Also included are vectors and

cc host cells comprising the fusion promoters, a method of identifying genes

cc involved in cellular proliferation or required for proliferation of a

cc prokaryotic cell using the vector, a method of identifying compounds that

cc inhibit the proliferation of a prokaryotic cell using the vector, a

cc method of identifying a compound that reduces the activity or level of a

cc ompound identified by the methods, a method of inhibiting the vector, a

cc compound identified by the methods, a method of inhibiting the vector, a

cc or expression of a gene in an operon required for proliferation using the

cvetor, manufacturing an antiblotic comprising using the vector or cell

cc and identifying a nucleic acid with promoter activity in Enterococcus

cc faccalis. The fusion promoters are useful for regulating nucleic acid or

cc polypeptide expression, particularly for regulating gene expression in

cc with potential antibiotic activity. The modified promoters are also

cuseful for renlacion and orenversor and college with energiful useful for replacing endogenous promoters to create cells with regulatable genes. The present sequence is vector (or fragment) incorporating a fusion promoter sequence of the invention. The invention relates to an isolated nucleic acid comprising a promoter comprising at least one promoter that is modified to

Novel human genes and their expression products which differentially expressed in different cell types

Claim 1; Page 2250-2251; 2479pp; English

CC comprising the sequences given in AAZI2532 to AAZI7779. Also described is camerined of detecting differentially expressed genes correlated with the cancerous state of a mammalian cell, comprising detecting at least one cdifferentially expressed gene product in a test sample from a cell cuspected of being cancerous, where the gene product is encoded by one cof the 5248 polymucleotide sequences given in AAZI2532 to AAZI7779. The cDlymucleotides can be used as a source of primers and probes, which can be used for a variety of purpose, e.g. detection of expression levels, can be used for raising antibodies for experimental, diagnostic and therapeutic purposes. The polymucleotides may also be used to construct can be used for raising antibodies for experimental, diagnostic and therapeutic purposes. The polymucleotides may also be used to construct can encoded protein); and to detect differences in expression levels between colls (e.g. to identify abnormal or diseased tissue in a human, to colorer). The polymucleotides of the invention are especially used in the Cdiagnosis, prognosis and management of colorectal cancer, breast cancer, cand lung cancer. The polynucleotides can also be used to screen for epitide analogues and antagonists. 18

The present sequence is useful for producing transgenic plants having altered levels of sphingolipid desaturase which in turn would alter the fatty acid composition. The enzyme is useful for producing polyclonal or monoclonal antibodies. The polymucleotide is also useful as primer or probe for screening cDNA libraries to isolate desired full-length cDNA clones.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Polynucleotide encoding delta-6 desaturase enzyme useful for producing transgenic plants and for producing antibodies specific to which is useful for screening cDNA expression libraries -

                                                        The polynucleotides sequences can be used in a method for detecting differentially expressed genes correlated with a cancerous state of a mammalian cell. The polynucleotides can also be used as probes for detecting and mapping related genes. They can be used in diagnosis and prognosis of diseases and disorders (e.g. identification of pre-metastatic or metastatic cancerous states, stages of cancer, or responsiveness of cancer to therapy). This is particularly for breast cancer, oestrogen receptor-positive breast cancer, oestrogen receptor-negative breast cancer, negative breast cancer, lung cancer, and colon cancer.
                                                                                                                                                                                                                                                                                                                                 AAA00010 to AAA02716 represent polynucleotides isolated from cDNA libraries constructed from human colon cancer cell lines. The present invention also describes a method of detecting differentially expressed genes correlated with a cancerous state of a mammalian cell, comprising detecting at least one differentially expressed gene product in a test sample derived from a cell suspected of being cancerous, where detection of the differentially expressed gene product is correlated with a cancerous state of the cell from which the test sample was derived.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Claim 1;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Polynucleotide library used to determine cancerous states
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                13-MAY-1999;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        WO9958675-A2

The present invention relates to human PAL-18 polypeptides and polynucleotides. The PAL-18 gene is found on chromosome 1q41. The sequences can be used to diagnose, monitor and treat cancers, particularly breast, colon and prostate cancers. The present sequence a PAL-18 polynucleotide shown in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 1064 BP; 93 A; 601 C; 51 G; 194 T; 125 other;

Mycobacterium tuberculosis or related Mycobacterium by determining the nucleotide sequence of the first strain at positions in the complete sequence of the genome that correspond to positions that differ in the nucleotide sequences of M. tuberculosis strains CDC 1551 (AAI99683) and H37Rv (AAI99682). The method is useful for evaluating strain variation of the complete sequences of M. tuberculosis and has valuable application in the fields of the tuberculosis and has valuable application in the fields of the tuberculosis and has valuable application in the fields of the tuberculosis and has valuable application in the fields of the tuberculosis and has valuable application.

                                                                                                                                                                                                    The present invention relates to human PAL-18 polypeptides and polynucleotides. The PAL-18 gene is found on chromosome 1q41. The sequences can be used to diagnose, monitor and treat cancers, particularly breast, colon and prostate cancers. The present sequences a PAL-18 polynucleotide shown in the invention.
                                                                                                                                                                                                                                                                                               Claim 1; Page 50-51; 150pp; English.
                                                                                                                                                                                                                                                                                                                           New isolated PAL-18 polypeptide, useful for diagnosing, characterizing, and treating disease and in determining disease susceptibility
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; PAL-18; cancer; chromosome 1q41; prostate cancer; colon cancer; breast cancer; cytostatic; gene; ds.

//clome_lib="Wheat CS whole plant collected phagemid palluescript SK(-); Site_l: EcoRI; Site_2: khol; plant tissues from wheat cv. CS grown to full tillering stage in greenhouse were collected at University of California, Davis (Jan Dvorak's lab, K. Deal and E. Akhunov). Total RNA was prepared from leaves (young leaf and third leaf), whole roots, crown, steam and sheath tissues, and then equal quantities of RNA were pooled from the these samples. PolyA was purified from the pooled RNA, a cDNA library was made, and the cDNA clones were in vivo excised to give paluescript SK(-) phagemids in J. Dvorak's lab (E. Akhunov, J. Dvorak) at the University of California, Davis. Colony plating, plasmid DNA preparations and DNA sequencing were performed in the OD Anderson lab (all other authors)."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     construction. The tissue, total RNA, and poly(A) RNA were prepared, cDNA synthesised, and directionally ligated into pSPORTI by Tim Sutton in the P Langridge Lab at the Department of Plant Science, University of Adelaide, Waite Campus, Australia. Average insert size 1.5Kb. Plasmid DNA preparations and DNA sequencing were performed in the OD Anderson lab (all other authors)."

If you are interested in getting corresponding physical clones, these are publicly available from ZmDB and may be found by BLAST searching at MSL, maizemap.org; ZmDB, www.zmdb.iastate.edu; TIGR, www.ntigr.org; or NCBI, www.ncbi.nlm.nih.gov. When the source of the maize cDNA sequences is either Virginia Walbot, Stanford or Pat Schnable, Iowa State, then clones may be requested from ZmDB:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ш
